Oefeningenreeks 4A nr. 49.1

$$\int \frac{\cos x}{1-\sin x}dx = \int \frac{1}{1-\sin x}d\left(\sin x\right) \overset{\sin x = t}{=} \int \frac{1}{1-t}dt$$
$$= -\int \frac{1}{1-t}d\left(1-t\right) = -\ln\left|1-t\right| + c \overset{t=\sin x}{=} -\ln\left|1-\sin x\right| + c$$
