$$f(x) = (\operatorname{Bgsin}(3x))$$

$$\begin{aligned}
&\frac{d}{dx}(\operatorname{Bgsin}(3x)) = \frac{d}{dg}(\operatorname{Bgsin}(g)) \cdot \frac{d}{dx}(3x) \\
&= \frac{1}{1+g^2} \cdot 3 \\
&= \frac{3}{1+(3x)^2} \\
&= \frac{3}{1+9x^2}
\end{aligned}$$
