$$f(x) = \frac{x^2+1}{x-1}$$

$$\begin{array}{rrrr|l}
 & x^2 & +0 & +1 & x-1 \\ \cline{5-5}
- & x^2 & -x & & x+1 \\ \cline{2-3}
 & & x & +1 & \\
- & & x & -1 & \\ \cline{3-4}
 & & & 2 &
\end{array}$$

$$f(x) - A = \frac{2}{x-1}$$

x		1	
$f(x) - A$	$-$	$\vert$	$+$

Conclusie:

$x \to +\infty : f > A$

$x \to -\infty : f < A$
