Bereken de volgende oneigenlijke integraal:

$$\int_{\frac{\pi}{4}}^{\frac{\pi}{2}} \frac{dx}{\sin^2(3x)}$$

onbepaalde integraal:

$$\int \frac{dx}{\sin^2(3x)}$$

Stel $u = 3x$, dan $du = 3 dx$, dus $dx = \frac{1}{3} du$.

$$\begin{aligned} & \int \frac{1}{\sin^2 u} \cdot \frac{1}{3} \cdot du \\ &= \frac{1}{3} \int \csc^2 u \cdot du \\ &= -\frac{1}{3} \cot u \\ &= -\frac{1}{3} \cot(3x) + c \end{aligned}$$

verticale asymptoot $x = \frac{\pi}{3}$ (omdat $\sin(3 \cdot \frac{\pi}{3}) = \sin(\pi) = 0$).

$$\int_{\frac{\pi}{4}}^{\frac{\pi}{2}} \frac{dx}{\sin^2(3x)} = \lim_{t \rightarrow \frac{\pi}{3}^-} \int_{\frac{\pi}{4}}^t \frac{dx}{\sin^2(3x)} + \lim_{s \rightarrow \frac{\pi}{3}^+} \int_s^{\frac{\pi}{2}} \frac{dx}{\sin^2(3x)}$$

eerste deel:

$$\lim_{t \rightarrow \frac{\pi}{3}^-} \left[-\frac{1}{3} \cot(3x) \right]_{\frac{\pi}{4}}^t = \lim_{t \rightarrow \frac{\pi}{3}^-} \left(-\frac{1}{3} \cot(3t) \right) - \left(-\frac{1}{3} \cot\left(\frac{3\pi}{4}\right) \right)$$

aangezien $3t \rightarrow \pi^-$, gaat $\cot(3t) \rightarrow -\infty$.

$$= \left(-\frac{1}{3} \cdot (-\infty) \right) - \left(-\frac{1}{3} \cdot (-1) \right) = +\infty - \frac{1}{3} = +\infty$$

tweede deel:

$$\lim_{s \rightarrow \frac{\pi}{3}^+} \left[-\frac{1}{3} \cot(3x) \right]_s^{\frac{\pi}{2}} = \left(-\frac{1}{3} \cot\left(\frac{3\pi}{2}\right) \right) - \lim_{s \rightarrow \frac{\pi}{3}^+} \left(-\frac{1}{3} \cot(3s) \right)$$

aangezien $3s \rightarrow \pi^+$, gaat $\cot(3s) \rightarrow +\infty$.

$$= 0 - \left(-\frac{1}{3} \cdot (+\infty) \right) = 0 - (-\infty) = +\infty$$

totaal:

$$\int_{\frac{\pi}{4}}^{\frac{\pi}{2}} \frac{dx}{\sin^2(3x)} = +\infty + (+\infty) = +\infty$$
