$T_5(f, 0)(x)$ voor $f(x) = e^{\sin x}$

$$\left| \begin{array}{l} f(x) = e^{\sin x} \\ f'(x) = e^{\sin x} \cos x \\ f''(x) = e^{\sin x} \cos^2 x - e^{\sin x} \sin x \end{array} \right.$$

We gebruiken de bekende Taylorontwikkelingen rond 0:

$$\sin x = x - \frac{x^3}{6} + \frac{x^5}{120}$$

$$e^u = 1 + u + \frac{u^2}{2!} + \frac{u^3}{3!} + \frac{u^4}{4!} + \frac{u^5}{5!}$$

Met:

$$u = \sin x = x - \frac{x^3}{6} + \frac{x^5}{120}$$

Dus:

$$\begin{aligned} e^{\sin x} = 1 + & \left(x - \frac{x^3}{6} + \frac{x^5}{120} \right) + \frac{\left(x - \frac{x^3}{6} + \frac{x^5}{120} \right)^2}{2!} \\ & + \frac{\left(x - \frac{x^3}{6} + \frac{x^5}{120} \right)^3}{3!} + \frac{\left(x - \frac{x^3}{6} + \frac{x^5}{120} \right)^4}{4!} + \frac{\left(x - \frac{x^3}{6} + \frac{x^5}{120} \right)^5}{5!} \end{aligned}$$

Tot en met graad 5 geeft dit:

$$e^{\sin x} = 1 + x + \frac{x^2}{2} - \frac{x^4}{8} - \frac{x^5}{15}$$

Dus:

$$T_5(f, 0)(x) = 1 + x + \frac{x^2}{2} - \frac{x^4}{8} - \frac{x^5}{15}$$
