$$\begin{aligned} & \frac{1}{\cos x + i \sin x} \\ &= \frac{\cos x - i \sin x}{(\cos x + i \sin x)(\cos x - i \sin x)} \\ &= \frac{\cos x - i \sin x}{\cos^2 x - i^2 \sin^2 x} \\ &= \frac{\cos x - i \sin x}{\cos^2 x + \sin^2 x} \\ &= \cos x - i \sin x \end{aligned}$$
