Opgave: Los de volgende vierkantwortel op in $\mathbb{C}$:

$$1 + 2\sqrt{6} = Z^2$$

Resolvente vergelijking opstellen:

$$\begin{cases} x^2 - y^2 = 1 \\ 2xy = 2\sqrt{6} \Rightarrow x^2(-y^2) = -6 \\ \lambda^2 - \lambda - 6 = 0 \end{cases}$$

$$\begin{aligned} D_\lambda &= 1^2 - 4(1)(-6) \\ &= 1 + 24 = 25 \end{aligned}$$

$$\lambda_1 = \frac{1+5}{2} \text{ en } \lambda_2 = \frac{1-5}{2} \Rightarrow \lambda_1 = 3 \text{ en } \lambda_2 = -2$$

Dus $x^2 = 3$ en $y^2 = 2$

$xy = \sqrt{6} > 0$, dus:

$$z_1 = \sqrt{3} + \sqrt{2}i \text{ en } z_2 = -\sqrt{3} - \sqrt{2}i$$
