$$z^2 - 5z + 8 = -2i(z + 5) \Leftrightarrow z^2 + (-5 + 2i)z + 8 + 10i = 0$$

$$D = (-5 + 2i)^2 - 4 \cdot (8 + 10i) = -11 - 60i$$

$$\Rightarrow \lambda^2 + 11\lambda - 900 = 0$$

$$\lambda_1 = \frac{-11 + 61}{2} = 25 \Rightarrow x = \pm 5$$

$$\lambda_2 = \frac{-11 - 61}{2} = -36 \Rightarrow y = \pm 6$$

$$\Rightarrow -5 + 6i \text{ en } 5 - 6i$$

$$z_1 = \frac{5 - 2i - 5 + 6i}{2} = 2i$$

$$z_2 = \frac{5 - 2i + 5 - 6i}{2} = 5 - 4i$$
