$$\frac{-1 + i}{\sqrt{2}}$$

Teller:

modulus:

$$r_t = \sqrt{(-1)^2 + 1^2} = \sqrt{2}$$

argument:

$$\alpha_t = \tan^{-1} \left(\frac{1}{-1} \right) = \tan^{-1}(-1) = \frac{3\pi}{4}$$

goniometrische vorm:

$$z_t = \sqrt{2} \operatorname{cis} \frac{3\pi}{4}$$

Noemer:

modulus:

$$r_n = \sqrt{\sqrt{2}^2 + 0^2} = \sqrt{2}$$

argument:

$$\alpha_n = \tan^{-1} \left(\frac{0}{\sqrt{2}} \right) = 0$$

goniometrische vorm:

$$z_n = \sqrt{2} \operatorname{cis} 0$$

$$\Rightarrow \frac{\sqrt{2} \operatorname{cis} \frac{3\pi}{4}}{\sqrt{2} \operatorname{cis} 0} = \frac{\sqrt{2}}{\sqrt{2}} \operatorname{cis} \left(\frac{3\pi}{4} - 0 \right) = \operatorname{cis} \left(\frac{3\pi}{4} \right)$$
