$$(-2\sqrt{3}, 2)$$

$$r = \sqrt{(-2\sqrt{3})^2 + 2^2} \Rightarrow r = 4$$

$$\theta = \text{Bgtan}\left(\frac{2}{-2\sqrt{3}}\right)$$

$$\theta = \pi - \frac{\pi}{6} \Rightarrow \theta = \frac{5\pi}{6}$$

$$\text{Antwoord: } \left(4, \frac{5\pi}{6}\right)$$
