De Euclidische deling van:

$$(z^6 + z^5 + i) \div (z^4 - i)$$

$$\begin{array}{r|rrrrrrrrrr}
 z^6 & +z^5 & +0z^4 & +0z^3 & +0z^2 & +0z & +i & z^4 & +0z^3 & +0z^2 & +0z & -i \\
 -z^6 & -0z^5 & -0z^4 & -0z^3 & +iz^2 & & & z^2 & +z & & & \\
 \hline
 & z^5 & +0z^4 & +0z^3 & +iz^2 & +0z & & & & & & \\
 & -z^5 & -0z^4 & -0z^3 & -0z^2 & +iz & & & & & & \\
 \hline
 & & 0z^4 & +0z^3 & +iz^2 & +iz & +i & & & & &
 \end{array}$$

$$Q(z) = z^2 + z$$

$$R = iz^2 + iz + i$$
