Bereken: $\forall x \geq 0 : \text{Bgsin } x + \text{Bgcos } x$

$$\text{Bgsin } x + \text{Bgcos } x = \text{Bgsin}(\sin \alpha) + \text{Bgcos}(\sin \alpha)$$

$$\text{met } \sin \alpha = x \text{ en } \alpha \in \left[\frac{-\pi}{2}, \frac{\pi}{2} \right]$$

$$= \alpha + \text{Bgcos}(\sin \alpha) = \alpha + \frac{\pi}{2} - \alpha = \frac{\pi}{2}$$

$$\text{want } \frac{\pi}{2} \in \left[0, \frac{\pi}{2} \right] \text{ en } \cos \left(\frac{\pi}{2} - \alpha \right) = \sin \alpha \Rightarrow \text{Bgcos}(\sin \alpha) = \frac{\pi}{2} - \alpha$$
