 Oefeningenreeks 2D nr. 10.14

Bereken de volgende limiet:

$$\lim_{x \rightarrow 2} \frac{x^3 - x^2 - 8x + 12}{3x^3 - 10x^2 + 4x + 8} = \frac{0}{0}$$

Teller ontbinden:

$$\begin{array}{c|ccc|c} & 1 & -1 & -8 & 12 \\ 2 & & 2 & 2 & -12 \\ \hline & 1 & 1 & -6 & 0 \end{array}$$

Noemer ontbinden:

$$\begin{array}{c|ccc|c} & 3 & -10 & 4 & 8 \\ 2 & & 6 & -8 & -8 \\ \hline & 3 & -4 & -4 & 0 \end{array}$$

$$\Leftrightarrow \lim_{x \rightarrow 2} \frac{\cancel{(x-2)}(x^2 + x - 6)}{\cancel{(x-2)}(3x^2 - 4x - 4)} = \frac{0}{0}$$

Teller verder ontbinden:

$$\begin{array}{c|cc|c} & 1 & 1 & -6 \\ 2 & & 2 & 6 \\ \hline & 1 & 3 & 0 \end{array}$$

Noemer verder ontbinden:

$$\begin{array}{c|cc|c} & 3 & -4 & -4 \\ 2 & & 6 & 4 \\ \hline & 3 & 2 & 0 \end{array}$$

$$\Leftrightarrow \lim_{x \rightarrow 2} \frac{\cancel{(x-2)}(x+3)}{\cancel{(x-2)}(3x+2)} = \frac{5}{8}$$
