$$\begin{aligned}\lim_{x \rightarrow \pi} \frac{1 + \cos 2x}{3 \sin x} &= \lim_{x \rightarrow \pi} \frac{1 + 2 \cos^2 x - 1}{3 \sin x} = \\ &= \lim_{x \rightarrow \pi} \frac{2 \cos^2 x}{3 \sin x} = \frac{2 \cos^2 \pi}{3 \sin \pi} = \frac{2 \cdot (-1)^2}{3 \cdot 0} = \frac{2}{0} = \infty\end{aligned}$$

Wij kijken naar de linker en rechter limiet apart:

$$\begin{aligned}\lim_{x \rightarrow \pi^-} \frac{2 \cos^2 x}{3 \sin x} &= \frac{2}{0^+} = +\infty & x < \pi \rightarrow \sin x \text{ positief} \\ \lim_{x \rightarrow \pi^+} \frac{2 \cos^2 x}{3 \sin x} &= \frac{2}{0^-} = -\infty & x > \pi \rightarrow \sin x \text{ negatief}\end{aligned}$$
