$$f(x) = \lfloor x \rfloor - 4$$

$$\lim_{x \rightarrow 0-} (\lfloor x \rfloor - 4) = -1 - 4 = -5$$

$$\lim_{x \rightarrow 0+} (\lfloor x \rfloor - 4) = 0 - 4 = -4$$

Limiet bestaat niet.

$$\lim_{x \rightarrow 4-} (\lfloor x \rfloor - 4) = 3 - 4 = -1$$

$$\lim_{x \rightarrow 4+} (\lfloor x \rfloor - 4) = 4 - 4 = 0$$

Limiet bestaat niet.

$$\lim_{x \rightarrow \frac{1}{2}} (\lfloor x \rfloor - 4) = 0 - 4 = -4$$

Limiet: -4

$$\lim_{x \rightarrow \sqrt{2}} (\lfloor x \rfloor - 4) = 1 - 4 = -3$$

Limiet: -3

$$\lim_{x \rightarrow -\frac{5}{4}} (\lfloor x \rfloor - 4) = -2 - 4 = -6$$

Limiet: -6

$$\lim_{x \rightarrow +\infty} (\lfloor x \rfloor - 4) \geq +\infty - 5 = +\infty$$

Limiet: $+\infty$

$$\text{Want: } x - 5 < \lfloor x \rfloor - 4 \leq x - 4$$
