$$\begin{aligned} & \lim_{y \rightarrow -\infty} \left(\frac{x}{x-2} \right)^{-1} \\ &= \lim_{y \rightarrow -\infty} \left(\frac{x-2}{x} \right) \\ &= \lim_{y \rightarrow -\infty} \left(\frac{x}{x} - \frac{2}{x} \right) \\ &= 1 - \left(\frac{2}{-\infty} \right) = 1 \end{aligned}$$
