$$25 \cdot 2^x = 4 \cdot 5^x$$

$$\Rightarrow \frac{25}{4} = \frac{5^x}{2^x}$$

$$\Rightarrow \frac{25}{4} = \left(\frac{5}{2}\right)^x$$

$$\Rightarrow \left(\frac{5}{2}\right)^2 = \left(\frac{5}{2}\right)^x$$

$$\Rightarrow x = 2$$
