Bereken de afgeleide van $f(x) = -3x^2$ voor $a \in \{-2, 1, 5\}$

$$f'(a) = \lim_{h \rightarrow 0} \frac{f(a+h) - f(a)}{h}$$

- $a = -2$

$$\begin{aligned} f'(-2) &= \lim_{h \rightarrow 0} \frac{-3(h-2)^2 - f(-2)}{h} \\ &= \lim_{h \rightarrow 0} \frac{-3(h^2 - 4h + 4) + 12}{h} \\ &= \lim_{h \rightarrow 0} \frac{-3h^2 + 12h}{h} \\ &= \lim_{h \rightarrow 0} (-3h + 12) = 12 \end{aligned}$$

- $a = 1$

$$\begin{aligned} f'(1) &= \lim_{h \rightarrow 0} \frac{-3(h+1)^2 - f(1)}{h} \\ &= \lim_{h \rightarrow 0} \frac{-3(h^2 + 2h + 1) - 3}{h} \\ &= \lim_{h \rightarrow 0} \frac{-3h^2 - 6h}{h} \\ &= \lim_{h \rightarrow 0} (-3h - 6) = -6 \end{aligned}$$

- $a = 5$

$$\begin{aligned} f'(5) &= \lim_{h \rightarrow 0} \frac{-3(h+5)^2 - f(5)}{h} \\ &= \lim_{h \rightarrow 0} \frac{-3(h^2 + 10h + 25) - 75}{h} \\ &= \lim_{h \rightarrow 0} \frac{-3h^2 - 30h}{h} \\ &= \lim_{h \rightarrow 0} (-3h - 30) = -30 \end{aligned}$$
