$$\begin{aligned}f(x) &= \frac{(3x-1)^2}{3x+1} \\f'(x) &= \frac{6(3x-1) \cdot (3x+1) - (3x-1)^2 \cdot 3}{(3x+1)^2} \\&= \frac{3(3x-1) \cdot [2(3x+1) - (3x-1)]}{(3x+1)^2} \\&= \frac{3(3x-1) \cdot 3(x+1)}{(3x+1)^2} \\&= \frac{9(3x-1)(x+1)}{(3x+1)^2}\end{aligned}$$
