Oefeningenreeks 3A nr. 26.5

$$f(x) = (\text{Bgsin}(3x))$$

$$\frac{d}{dx}(\text{Bgsin}(3x)) = \frac{d}{dg}(\text{Bgsin}(g)) \cdot \frac{d}{dx}(3x)$$

$$= \frac{1}{1+g^2} \cdot 3$$

$$= \frac{3}{1+(3x)^2}$$

$$= \frac{3}{1+9x^2}$$
