$$f(x) = \frac{x^2 - 5x + 7}{x + 3}$$

$$\begin{array}{r|l}
 \begin{array}{rrr}
 x^2 & -5x & +7 \\
 - & x^2 & +3x \\
 \hline
 & -8x & +7 \\
 - & -8x & -24 \\
 \hline
 & & 31
 \end{array}
 & \begin{array}{l}
 x + 3 \\
 \hline
 x - 8
 \end{array}
 \end{array}$$

$$f(x) - A = \frac{31}{x + 3}$$

$$\begin{array}{c|c}
 x & -3 \\
 \hline
 f(x) - A & - \quad | \quad +
 \end{array}$$

Conclusie:

$$x \rightarrow +\infty : f > A$$

$$x \rightarrow -\infty : f < A$$
