$$f(x) = \sin x + \frac{1}{2} \sin 2x$$

1. Domein:  $\mathbb{R}$
2. Asymptoten: geen, periodieke functie
3. Tekenonderzoek  $f(x)$

$$f(x) = \sin x + \sin x \cos x = \sin x(1 + \cos x)$$

$$f(x) = 0 \Leftrightarrow \sin x = 0 \text{ of } \cos x = -1$$

$$x = n\pi \text{ en } x = \pi + 2k\pi$$

$$f^{-1}(0) = x \in \mathbb{R} | x = n\pi, n \in \mathbb{Z}$$

4. Tekenonderzoek  $f'(x)$

$$f(x) = \cos x + \frac{1}{2} \cdot 2 \cos 2x = \cos x + \cos 2x = 2 \cos \left( \frac{3x}{2} \right) \cos \left( \frac{x}{2} \right)$$

$$f'(x) = 0 \Leftrightarrow \cos\left(\frac{3x}{2}\right) = 0 \text{ of } \cos\left(\frac{x}{2}\right) = 0$$

$$x = \pm \frac{\pi}{3} + 2k\pi \text{ en } x = \pi + 2k\pi$$

5. Tekenonderzoek  $f''(x)$

$$f''(x) = -\sin x - 2\sin 2x$$

$$= -\sin x - 4\sin x \cos x = \sin x(-1 - 4\cos x) = 0$$

$$\sin x = 0 \Rightarrow x = k\pi$$

$$\cos x = -\frac{1}{4} \Rightarrow \pm \text{Bgc} \cos\left(-\frac{1}{4}\right) + 2k\pi$$
