$$\int \frac{1-5x}{1-2x} dx$$
$$= \int \left(\frac{5}{2} + \frac{\frac{-3}{2}}{1-2x} \right) dx$$

stel $u = 1 - 2x$

$$du = -2dx$$

$$= \frac{5}{2}x + \frac{3}{4} \int \frac{du}{u}$$
$$= \frac{5}{2}x + \frac{3}{4} \int \frac{du}{u}$$
$$= \frac{5}{2}x + \frac{3}{4} \ln |1 - 2x| + C$$
