$$\begin{aligned}\text{Opgave: } & \int \frac{2dx}{2x-4} \\ \Rightarrow & \int \frac{2dx}{2x-4} = \int \frac{dx}{x-2} \\ \Rightarrow & t = x - 2 \Rightarrow dx = dt \\ & = \int \frac{dt}{t} = \ln |t| + c = \ln |x - 2| + c\end{aligned}$$
