$$\begin{aligned} & \int \left(x^5 + (x-2)^3 - 3(3x+1)^4 \right) dx \\ &= \int x^5 dx + \int (x-2)^3 d(x-2) - \int (3x+1)^4 d(3x+1) \\ &= \frac{x^6}{6} + \frac{(x-2)^4}{4} - \frac{(3x+1)^5}{5} + c \end{aligned}$$
