$$\begin{aligned}\int e^x \cosh x dx &= \int e^x \frac{e^x + e^{-x}}{2} dx = \frac{1}{2} \int \left(e^{2x} + \frac{e^x}{e^x} \right) dx \\ &= \frac{1}{4} \int e^{2x} d(2x) + \frac{1}{2} \int dx = \frac{e^{2x}}{4} + \frac{x}{2} + c\end{aligned}$$
