$$\begin{aligned}\int \frac{\cos x}{1 - \sin x} dx &= \int \frac{1}{1 - \sin x} d(\sin x) \stackrel{\sin x = t}{=} \int \frac{1}{1 - t} dt \\ &= - \int \frac{1}{1 - t} d(1 - t) = - \ln |1 - t| + c \stackrel{t = \sin x}{=} - \ln |1 - \sin x| + c\end{aligned}$$
