Omdat we weten dat $\tan^2(a) + 1 = \sec^2(a) \Rightarrow \tan^2(a) = \sec^2(a) - 1$

$$\begin{aligned} &= \int \left(\frac{1}{\cos^2 5x} - 1 \right) dx \\ &= \frac{1}{5} \tan(5x) - x + C \end{aligned}$$
