$$\begin{aligned}\int_{\pi}^{2\pi} \cos^2 x dx &= \int_{\pi}^{2\pi} \frac{1 + \cos 2x}{2} dx \\ &= \left[\frac{x}{2} \right]_{\pi}^{2\pi} + \left[\frac{1}{4} \sin 2x \right]_{\pi}^{2\pi} = \pi - \frac{\pi}{2} + 0 - 0 = \frac{\pi}{2}\end{aligned}$$
