$$\begin{aligned} & \int_{-\infty}^0 x e^x dx \\ &= \lim_{a \rightarrow -\infty} \int_a^0 x e^x \\ & \left\{ \begin{array}{l} u = x \\ dv = e^x dx \end{array} \right. \Rightarrow \left\{ \begin{array}{l} du = dx \\ v = e^x \end{array} \right. \\ &= \lim_{a \rightarrow -\infty} \left(x e^x - \int_a^0 e^x dx \right) \\ &= \lim_{a \rightarrow -\infty} [x e^x - e^x]_a^0 \\ &= \lim_{a \rightarrow -\infty} (0 e^0 - e^0) - (a e^a - e^a) \\ &= -1 + \infty \cdot e^{-\infty} + e^{-\infty} \\ &= -1 \end{aligned}$$
