$$\begin{aligned} & \int_1^{+\infty} \frac{\ln x}{(x+1)^2} dx \\ &= \lim_{a \rightarrow +\infty} \int_1^a \ln x (x+1)^{-2} dx \end{aligned}$$

We weten dat: $\int_d^c u dv = [uv]_d^c - \int_d^c v du$

Laat:

$$u = \ln x, \quad dv = (x+1)^{-2} dx$$

$$du = \frac{1}{x} dx, \quad v = -(x+1)^{-1}$$

Dus:

$$\lim_{a \rightarrow +\infty} \int_1^a \ln x (x+1)^{-2} dx = \lim_{a \rightarrow +\infty} \left(- \left[\frac{\ln x}{x+1} \right]_1^a + \int_1^a \frac{1}{x(x+1)} dx \right)$$

We weten dat:

$$\frac{1}{x(x+1)} = \frac{A}{x} + \frac{B}{x+1}$$

$$\Rightarrow A = 1, \quad B = -1$$

$$\begin{aligned} \lim_{a \rightarrow +\infty} \int_1^a \ln x (x+1)^{-2} dx &= \lim_{a \rightarrow +\infty} \left(- \left[\frac{\ln x}{x+1} \right]_1^a + \int_1^a \left(\frac{1}{x} - \frac{1}{(x+1)} \right) dx \right) \\ &= \lim_{a \rightarrow +\infty} \left(- \left(\frac{\ln a}{a+1} - \frac{\ln 1}{2} \right) + [\ln x - \ln x + 1]_1^a \right) \\ &= \lim_{a \rightarrow +\infty} -\frac{\ln a}{a+1} + \ln a - \ln(a+1) - \ln 1 + \ln 2 \\ &= \lim_{a \rightarrow +\infty} -\frac{\ln a}{a+1} + \ln a - \ln(a+1) + \ln 2 \\ &= \lim_{a \rightarrow +\infty} -\frac{\ln a}{a+1} + \ln \left(\frac{a}{a+1} \right) + \ln 2 \\ &= \lim_{a \rightarrow +\infty} -\frac{\frac{1}{\frac{1}{a}}}{\frac{1}{\frac{1}{a}} + 1} + \ln 1 + \ln 2 \\ &= \lim_{a \rightarrow +\infty} -\frac{1}{a} \\ &= \ln 2 \end{aligned}$$
