$$f(x) = x^2 + 2x$$

$$\begin{aligned} & - \int_{-1}^0 (x^2 + 2x) dx + \int_0^3 (x^2 + 2x) dx \\ &= - \left[\frac{x^3}{3} + x^2 \right]_{-1}^0 + \left[\frac{x^3}{3} + x^2 \right]_0^3 \\ &= \frac{2}{3} + 18 = \frac{56}{3} \end{aligned}$$
