Oefeningenreeks 5D nr. 4.4

$$y_1 = -x^2 + 4x + 4 \text{ en } y_2 = x^2 - 6x + 12$$

$$y_1 - y_2 = -2x^2 + 10x - 8$$

$$D = 36 \Rightarrow x_{1,2} = \{1, 4\}$$

$$\Rightarrow \int_1^4 |-2x^2 + 10x - 8| dx = \left[\frac{-2x^3}{3} + 5x^2 - 8x \right]_1^4 = 9$$
