$$(4, -12, 36, \dots)$$

$$q = \frac{-12}{4} = -3$$

$$x_1 = 4$$

$$s_n = x_1 \cdot \frac{1 - q^n}{1 - q}$$

$$s_8 = 4 \cdot \frac{1 - (-3)^8}{1 - (-3)}$$

$$s_8 = 4 \cdot \frac{1 - 6561}{1 + 3}$$

$$s_8 = 4 \cdot \frac{-6560}{4}$$

$$s_8 = -6560$$
