$$\begin{aligned} & (z^2 + 2z + 2) \cdot (z^2 - 2z - 2) \\ &= z^4 - 2z^3 - 2z^2 + 2z^3 - 4z^2 - 4z + 2z^2 - 4z - 4 \\ &= z^4 + (-2z^3 + 2z^3) + (-2z^2 - 4z^2 + 2z^2) + (-4z - 4z) - 4 \\ &= z^4 - 4z^2 - 8z - 4 \end{aligned}$$
