$$\sin(2 \operatorname{Bgtan}(x))$$

$$\text{Stel } \alpha = 2 \operatorname{Bgtan}(x)$$

$$\Rightarrow x = \tan \frac{\alpha}{2}$$

$$\Rightarrow \sin(2 \operatorname{Bgtan}(x))$$

$$= \sin(\alpha)$$

$$= \frac{2x}{1+x^2} \text{ met } x = \tan \frac{\alpha}{2}$$
