$$\begin{aligned} & \int \cosh^2 x dx \\ &= \int \frac{\cosh(2x) + 1}{2} dx \\ &= \frac{1}{2} \int \cosh(2x) + 1 dx \\ &= \frac{1}{2} \left(\int \cosh(2x) dx + \int 1 dx \right) \\ &= \frac{1}{2} \left(\frac{\sinh(2x)}{2} + x \right) \\ &= \frac{\sinh(2x)}{4} + \frac{1}{2} x + C \end{aligned}$$
