$$I = \int x^9 \sqrt{x^5 + 1} dx$$

$$\text{Stel } x^5 + 1 = t^2$$

$$\Rightarrow 5x^4 dx = \frac{2}{5} t dt$$

$$I = \int x^4 x^5 \sqrt{x^5 + 1} dx$$

$$= \frac{2}{5} \int (t^2 - 1) t^2 dt$$

$$= \frac{2}{5} \left(\frac{t^5}{5} - \frac{t^3}{3} \right) + C$$

$$= \frac{2(x^5 + 1)^{\frac{5}{2}}}{25} - \frac{2(x^5 + 1)^{\frac{3}{2}}}{15} + C$$
