$$\int x\sqrt{1-4x^2}dx$$

$$\text{Stel } t = 1 - 4x^2 \Rightarrow dt = -8xdx$$

$$\Rightarrow x = \frac{\sqrt{t-1}}{2} \Rightarrow dx = \frac{dt}{-4\sqrt{t-1}}$$

$$= \int \frac{\sqrt{\frac{t-1}{4}}\sqrt{t}}{-4\sqrt{\frac{t-1}{4}}}dt$$

$$= \int \frac{\sqrt{t}}{-4}dt$$

$$= -\frac{1}{4} \int t^{\frac{1}{2}}dt$$

$$= -\frac{1}{4} \frac{t^{\frac{3}{2}}}{\frac{3}{2}} + C$$

$$= -\frac{\sqrt{t^3}}{6} + C$$

$$= -\frac{\sqrt{(1-4x^2)^3}}{6} + C$$
