$$\int \frac{dx}{(x+1)\sqrt{x}}$$

$$\text{Stel } \sqrt{x} = t \text{ dan } dt = \frac{dx}{2\sqrt{x}} \Leftrightarrow dx = 2\sqrt{x}dt$$

$$\int \frac{2t}{(t^2+1)t}dt = 2 \int \frac{1}{t^2+1}dt$$

$$= 2 \operatorname{Bgtan} t + c$$

$$= 2 \operatorname{Bgtan} \sqrt{x} + c$$
