$$\begin{aligned}\text{Opgave: } & \int \tan^2 x (1 + \tan^2 x) dx \\ &= \int \tan^2 x dx + \int \tan^4 x dx \\ &= \int \tan^2 x dx + \frac{1}{3} \tan^3 x - \int \tan^2 x dx \\ &= \frac{1}{3} \tan^3 x + c\end{aligned}$$
