$$\int_0^1 \frac{dx}{x^2 + 4}$$

We gebruiken de substitutie $x = 2 \tan \theta$, dus $dx = 2 \sec^2 \theta d\theta$

Pas de grenzen aan:

Als $x = 0$, dan $\theta = 0$

Als $x = 1$, dan $1 = 2 \tan \theta \Rightarrow \theta = \text{Bgtan} \left(\frac{1}{2} \right)$

Vervang in de integrand:

$$\begin{aligned} \int_0^1 \frac{dx}{x^2 + 4} &= \int_0^{\text{Bgtan}(\frac{1}{2})} \frac{2 \sec^2 \theta d\theta}{4 \tan^2 \theta + 4} \\ &= \int_0^{\text{Bgtan}(\frac{1}{2})} \frac{2 \sec^2 \theta d\theta}{4(\tan^2 \theta + 1)} \\ &= \int_0^{\text{Bgtan}(\frac{1}{2})} \frac{2 \sec^2 \theta d\theta}{4 \sec^2 \theta} \\ &= \int_0^{\text{Bgtan}(\frac{1}{2})} \frac{2}{4} d\theta = \frac{1}{2} \int_0^{\text{Bgtan}(\frac{1}{2})} d\theta \\ &= \frac{1}{2} \left(\text{Bgtan} \left(\frac{1}{2} \right) - 0 \right) \\ &= \frac{1}{2} \text{Bgtan} \left(\frac{1}{2} \right) \\ \text{Dus, } \int_0^1 \frac{dx}{x^2 + 4} &= \frac{1}{2} \text{Bgtan} \left(\frac{1}{2} \right) \end{aligned}$$
