Oefeningenreeks 5F nr. 1.3

opgave: $r = -2 \cos(\theta)$

$$\begin{aligned} S &= 2 \cdot \frac{1}{2} \int_0^{\frac{\pi}{2}} (-2 \cos(\theta))^2 d\theta \\ &= \int_0^{\frac{\pi}{2}} 4 \cdot \left(\frac{1 + \cos(2\theta)}{2} \right) d\theta \\ &= 2 \cdot \left[\theta + \frac{\sin \theta}{2} \right]_0^{\frac{\pi}{2}} \\ &= \pi \end{aligned}$$
