$$\text{Gegeven: } x_4 + x_6 = 30 \text{ en } x_9 + x_{11} = 50$$

$$x_4 = x_1 + 3v \text{ en } x_6 = x_1 + 5v$$

$$x_9 = x_1 + 8v \text{ en } x_{11} = x_1 + 10v$$

$$x_4 + x_6 = 30 \Leftrightarrow x_1 + 3v + x_1 + 5v = 30$$

$$\Leftrightarrow 2x_1 + 8v = 30 \Leftrightarrow x_1 = \frac{30 - 8v}{2} = 15 - 4v$$

$$x_9 + x_{11} = 50 \Leftrightarrow x_1 + 8v + x_1 + 10v = 50$$

$$\Leftrightarrow 2x_1 + 18v = 50 \Leftrightarrow x_1 = \frac{50 - 18v}{2} = 25 - 9v$$

$$15 - 4v = 25 - 9v$$

$$\Leftrightarrow 5v = 10 \Leftrightarrow v = 2$$

$$\Rightarrow x_1 = 15 - 4 \cdot 2 = 7$$
