Oefeningenreeks 6B nr. 4.7

Gegeven: $x_1 = 0.4$ en $s_{10} = 16.5$

$$s_n = \frac{n}{2} \cdot (x_1 + x_n)$$

$$s_{10} = \frac{(0.4 + x_{10}) \cdot 10}{2} = 16.5$$

$$\Leftrightarrow 0.4 + x_{10} = 3.3$$

$$\Leftrightarrow x_{10} = 2.9$$

$$2.9 = 0.4 + 9v$$

$$\Leftrightarrow v = \frac{5}{18}$$
