$$\begin{aligned}\frac{\partial f_1}{\partial x} &= -\frac{2x \cdot \sin x^2}{\ln(7) \cos x^2} \\ \frac{\partial f_2}{\partial x} &= \frac{d}{dx} e^{x \cdot \ln x} = x^x \cdot \ln x + x^x \\ \frac{\partial f_3}{\partial x} &= \frac{-3}{x^4} \\ \Rightarrow Df &= \begin{pmatrix} -\frac{2x \cdot \sin x^2}{\ln(7) \cos x^2} \\ x^x \cdot \ln x + x^x \\ \frac{-3}{x^4} \end{pmatrix}\end{aligned}$$
