$$f(x, y) = \sin \frac{\pi xy}{4} \text{ in punt } a(3, -1)$$

$$\frac{\partial f}{\partial x} = \cos \frac{\pi yx}{4} \cdot \frac{\pi y}{4}$$

$$\frac{\partial f}{\partial x} = \cos \frac{\pi yx}{4} \cdot \frac{\pi x}{4}$$

$$\nabla f(a) = \left(\frac{-\sqrt{2}}{2} \cdot \left(-\frac{\pi}{4}\right), \frac{-\sqrt{2}}{2} \cdot \frac{3\pi}{4} \right)$$

$$\nabla f(a) = \left(\frac{\sqrt{2}\pi}{8}, \frac{-3\sqrt{2}\pi}{8} \right)$$
