$$(1 + 2i)^4$$

$$\begin{aligned} & \sum_{k=0}^4 \binom{4}{k} 1^{4-k} \cdot (2i)^k \\ &= 1^4 + 4 \cdot 1^3 \cdot 2i + 6 \cdot 1^2 \cdot (2i)^2 + 4 \cdot 1 \cdot (2i)^3 + (2i)^4 \\ &= 1 + 8i - 24 - 32i + 16 \\ &= -7 - 24i \end{aligned}$$
