$$\begin{aligned} \frac{z+1-i}{z-1-i} - \frac{2+2i}{z^2-z-iz} - i &= 2 \\ \Rightarrow \frac{(z-1-i)+2}{z-1-i} - \frac{2+2i}{z^2-z-iz} &= 2+i \\ \Rightarrow 1 + \frac{2}{z-1-i} - \frac{2+2i}{z^2-z-iz} &= 2+i \\ \Rightarrow \frac{2}{z-1-i} - \frac{2+2i}{z^2-z-iz} &= 1+i \\ \Rightarrow \frac{2z-2-2i}{z(z-1-i)} &= 1+i \\ \Rightarrow \frac{2}{z} = 1+i \Rightarrow z = \frac{2}{1+i} &= 1-i \end{aligned}$$
