De functie is discontinu in het punt $a = 1, f(a) = 2$

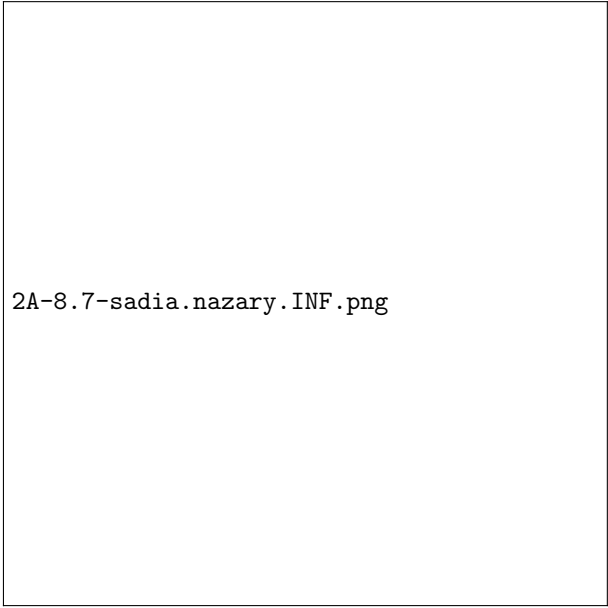

pak $\varepsilon < \frac{1}{2}$ stel $\delta > 0$

stel $x \in](1 - \delta) \vee 0, 1[$

dan $|f(x) - 2| = 2 - x > 1 > \frac{1}{2} \geq \varepsilon$

dus $|f(x) - 2| \geq \varepsilon$ en $|x - 1| < \delta$

dus f is discontinu in 1
